

Aniket Sangohi

DevSecOps Engineer | AWS & Azure Cloud Specialist | 4+ Years Experience

Email: manjaniket@gmail.com | Phone: +91 8200366013 | Location: Ahmedabad, Gujarat

Objective

Detail-oriented DevOps Engineer with 4+ years of experience in automating deployments, optimizing CI/CD pipelines, and enhancing system reliability. Proven expertise in AWS and Azure cloud platforms, cloud security, containerization with Docker and Kubernetes, and infrastructure automation using Terraform and Ansible. Skilled in cost optimization, compliance, and disaster recovery strategies.

Skill Sets

1. Cloud Security:

- AWS Identity and Access Management (IAM), Security Groups, AWS Key Management Service (KMS), AWS Config, CloudTrail, AWS Security Hub, GuardDuty.
- Best practices for cloud security architecture (e.g., least privilege access, network segmentation, encrypted data at rest and in transit).
- Azure Cloud (VM, Vnets, App services, Directory Service, Blob storage etc.)
- AWS services (EC2, S3, Route53, IAM, CloudWatch, CloudFormation, SNS, Lambda, Datasync, Monitron, RDS, DMS, Organization, VPC, Resource group, Cost explorer, S3 Storage Class etc.)
- Databases: MongoDB, MySQL, AWS RDS Aurora

2. DevSecOps Practices:

- Implementing and managing security checks in CI/CD pipelines (e.g., static application security testing (SAST) and dynamic application security testing (DAST) tools).
- Infrastructure as Code (IaC) security tools like AWS Config for automated compliance checking.
- Also Worked with tools like (Docker, Terraform, Jenkins, Ansible, Kubernetes etc.)
- CI/CD Tools: Jenkins, GitLab CI/CD, GitHub Actions
- Version Control: Git, Bitbucket
- Virtualization: Proxmox, VMware.

3. Automation & Scripting:

- Automation of security tasks (e.g., automated vulnerability scanning, security patching).
- Proficiency in CI/CD tools with a focus on security, such as GitHub Actions, GitLab CI, and Jenkins for automated code testing and deployment.
- Languages: Python, Bash, CMD (BAT)

4. Monitoring & Incident Response:

- AWS CloudWatch, CloudTrail, and other AWS monitoring tools for identifying and responding to incidents.
- Experience with alerting and monitoring frameworks such as ELK Stack (Elasticsearch, Logstash, and Kibana), Datadog, or Prometheus & Grafana.
- Monitoring Tools: CloudWatch, Zabbix, Nagios

5. Compliance and Governance:

- Familiarity with industry compliance standards (e.g., ISO 27001, SOC 2, GDPR) and frameworks (e.g., CIS Benchmarks, NIST).
 - Implementing compliance automation using tools such as AWS Config Rules or Conformity
-

Professional Experience

AWS Cloud Engineer

DeepKiran Pvt. Ltd. | Oct 2020 – Present

- **Server Management:** Configured and maintained multiple servers, ensuring 99.95% uptime with disaster recovery strategies.
- **CI/CD Pipeline:** Implemented Jenkins and AWS tools to streamline release processes, reducing release times by 40%.
- **Infrastructure Automation:** Developed shell and Python scripts to automate infrastructure setup, enhancing operational efficiency.
- **Infrastructure as Code (IaC):** Utilized Terraform to provision and manage infrastructure, enabling repeatability and scalability.
- **Source Control Management:** Managed Git repositories, branching, tagging, and permissions to optimize collaboration and version control.
- **Cost Optimization:** Improved cloud infrastructure, achieving a cost reduction of ~50% through architectural and operational efficiencies.

- **Cloud Storage Management:** Administered AWS S3, implementing lifecycle policies, cross-region replication, and access controls to secure and optimize storage.
 - **Cloud Operations:** Actively monitored and managed AWS resources (EC2, S3, RDS), including automated backups, patching, scaling, and IAM role configurations using AWS Systems Manager (SSM).
 - **Deployment Optimization:** Automated deployment pipelines, reducing deployment times from 5+ hours to under 5 minutes, integrating tools like SonarQube for code scanning and quality checks.
 - **Data Transfer & Monitoring:** Leveraged AWS DataSync for efficient data transfers and configured Monitron for hardware monitoring.
 - **Configuration Management:** Automated multi-server configurations with Ansible, Python, and Bash scripting for consistent and error-free deployment.
 - **Raspberry Pi Security:** Implemented data encryption and security using tools like eCryptfs on Raspberry Pi devices.
 - **Virtualization & Storage:** Installed and managed virtualization tools (Proxmox, VMware) alongside NAS, SMB, FTP, and backup utilities for robust data storage and access.
 - **Application Server Administration:** Deployed and managed Zimbra (mail server) and FreePBX (VoIP) for seamless communication solutions.
-

Education

Bachelor of Technology in Computer Science

Parul University | Graduated : 2020 | CGPA : 8.4

Certifications

- AWS Certified Solution Architect – Associate

Interests & Hobbies

- Exploring emerging technologies and participating in hackathons.
- Playing strategy games like chess and sudoku to enhance problem-solving skills.
- Engaging in physical fitness activities like MMA to build focus and discipline.
